220 Emergency Energy Storage Power Supply

Overview

The 220V standard AC output of this power station can accurately match various emergency key equipment: when the power is off, it continuously supplies power to home ventilators and oxygen generators to ensure the stability of patients' vital signs; when the power is off due to earthquakes or heavy rains, it is used to drive emergency lights to illuminate the escape route, charge walkie-talkies and flashlights, and ensure that communication and lighting are not interrupted; when in distress outdoors, it supplies power to satellite phones to keep the distress signal unobstructed, supplies power to incubators to store emergency medicines, and even drives small pumps to deal with water accumulation.
