7-string lithium battery pack connection

Overview

Can a lithium ion battery pack have multiple strings?

Whenever possible, using a single string of lithium cells is usually the preferred configuration for a lithium ion battery pack as it is the lowest cost and simplest. However, sometimes it may be necessary to use multiple strings of cells. Here are a few reasons that parallel strings may be necessary:

How to connect a lithium battery pack?

To connect a lithium battery pack, the typical methods are connecting first in parallel and then in series, first in series and then in parallel, or mixing the parallel and series connections together. For a lithium battery pack used in pure electric buses, the connection is usually made first in parallel and then in series.

Why do we connect multiple lithium batteries to a string of batteries?

Connecting multiple lithium batteries into a string of batteries allows us to build a battery bank with the potential to operate at an increased voltage, or with increased capacity and runtime, or both.

What if there are only two batteries in a parallel string?

If there are only two batteries in the parallel string, we would then take a cable from the POS. (+) terminal of Battery 1 to the charger. We would use the POS. (+) terminal of Battery 2 for connection to the loads.

What is a lithium battery pack?

A lithium battery pack is a combination of individual lithium-ion cells. These cells work together to provide the necessary power for various applications. How these cells are connected—whether in series, parallel, or a combination of both—determines the overall voltage and capacity of the battery pack.

How many lithium cells are connected in a 3P battery pack?

For example, a 3P battery pack has three cells connected in parallel. If each cell has a capacity of 2000mAh, the total capacity of the pack is 6000mAh (2000mAh x 3). Parallel connections are beneficial for increasing the battery pack's capacity and thus extending the device's operating time. Part 4. What are the ways to connect the lithium cells?
