These cheap portable inverters are designed to be floating (no ground), and must remain floating, or will be damaged. You are reading 60v to ground, because they are floating. This is normal. You can connect a GFCI to them, but

it may not function as any protection. Just keep it and everything it's.

The plans called for 60 volt 2500 watt DC>AC inverter. I accidentally bought a 12 volt. The project also incorporates a 60v > 12v converter for stepping down the battery pack voltage for 12v outlets, cooling fans, etc. Theoretically, the power from the battery would go directly to the inverter, but.
