Base station communication charges

Overview

The following transactions are commonly referred to as secondary markets for radio spectrum and that allow and encourage licensees to make all or portions of their assigned licenses available to other entities.

What is a base station used for?

A base station, as a stationary transceiver, is the base hub for all lines of communication in a two-way radio system. It connects to a number of portable radio devices. There are a few ways that base stations are used in wireless communication including push-to-talk two-way radios, wireless telephone systems, and terrestrial trunked radio.

What is a base station in radio communications?

In radio communications, a base station is a wireless communications station installed at a fixed location and used to communicate as part of one of the following: a wireless telephone system such as cellular CDMA or GSM cell site. Base stations use RF power amplifiers (radio-frequency power amplifiers) to transmit and receive signals.

What is a base station in a two-way radio system?

In professional two-way radio systems, a base station is used to maintain contact with a dispatch fleet of hand-held or mobile radios, and/or to activate one-way paging receivers. The base station is one end of a communications link. The other end is a movable vehicle-mounted radio or walkie-talkie.

What is a SATCOM base station?

This system is a powerful, global, cost-effective solution that provides assured communications to military, special forces, law enforcement and government agencies. The self-contained SATCOM Base Station is housed in a rugged carrying case, and includes a laptop computer, Base Station Radio, antenna, and cabling.

Is a base station required for a two-way radio?

In two-way radio systems, base stations are used in various ways. They are required for some systems, such as terrestrial trunked radio, while others, like push-to-talk radios, may not necessarily need one. This blog will explain the different uses and types of base stations for two-way radios to help you determine if your system requires a base station.

How many wires are used to connect a base station?

When using two-way radios, some remote system configurations use four wires to connect the base station to the console. Other systems only need a two-wire link. Interference includes any instance of hearing a different radio signal that is not within your network.
