Base station wind power supply no load

Overview

The base load (also baseload) is the minimum level of demand on an over a span of time, for example, one week. This demand can be met by unvarying power plants or , depending on which approach has the best mix of cost, availability and reliability in any particular market. The remainder of demand, varying throughout a day, is met by

Wind power has no effect on base load. However, since base load providers can not be ramped down, if wind turbines produce power when there is no or little peak load, the extra electricity has to be dumped (e.g., into the ground) or the wind turbines turned off ("curtailment").
