Base stations of South Asian operators

Overview

• • • •

How many 5G base stations are there in South Korea?

South Korean telecom operators currently provide 5G services via Non-Standalone (NSA) 5G networks, which depend on previous 4G LTE networks. Korean mobile operators have deployed a total of 202,903 5G base stations as of the end of February, according to previous reports.

How many base stations are needed in South Korea?

Operators in South Korea were required to have 22,500 base stations by the end of 2021, 45,000 by the end of 2023, and 150,000 base stations upon completion of their 3.5 GHz spectrum rollout. Additionally, within three years, there were required to install 15,000 base stations utilizing 28 GHz.

Can a base station serve a radio?

Again, most of the sites have distributed RAN (D-RAN) so there may be one or more base stations (baseband unit or BBU) and each base station can serve one or more radios. See links at the bottom for tutorials on these topics.

How many 5G base stations will China Tower have in 2022?

China Tower had nearly 2.1 million telecom towers installed with 3.36m tower tenants at end of 2022. An MIIT minister said that China's operators will deploy 600k 5G base stations in 2023, taking total to 2.9m.
