Bolivia s wind power system

Overview

How can Bolivia improve energy production?

Bolivia continues to make efforts to upgrade the infrastructure needed for renewable energy production. The National Interconnected System (SIN), which the government has put in place, aims to improve the nation's capacity for producing electricity by building additional power plants, transmission lines and substations.

What type of electricity system does Bolivia have?

Like in other countries, Bolivia's electricity sector consists of a National Interconnected System (SIN) and off-grid systems (known as the Aislado). The economic downturn of the late 1990s, coupled with privatization and austerity efforts led by President Mesa, resulted in significant unemployment.

Is Bolivia part of relac?

For instance, Bolivia is part of RELAC, an alliance between Latin American and Caribbean countries for renewable energy development. One of its aims is for renewable energy to reach 70% of the regional electricity matrix.
