China Energy Storage Battery

Overview

How does China promote battery storage?

To promote battery storage, China has implemented a number of policies, most notably the gradual rollout since 2017 of the “mandatory allocation of energy storage” policy (强制配储), which is also known as the “new energy plus storage” model (新能源+储能).

Will China be a leader in energy storage capacity by 2034?

By 2034, China is projected to be a global leader in energy storage capacity, with electrochemical batteries, especially lithium-ion, expected to dominate the market. Energy storage systems are widely used as EV battery storage systems such as lithium ion batteries.

Does China have a market advantage for battery storage systems?

China has a market advantage for battery storage systems. At present China does have some market advantages when it comes to the development of BESS infrastructure, including the supply chain related to global lithium-ion battery production.

How big is China's energy storage capacity?

Current installed new energy storage capacity, which is made up mostly of lithium-ion battery storage, was 95 GW as of June, the regulator, the National Energy Administration, said in August. China has raced ahead of its energy storage targets in the past.

What is China's energy storage policy & regulatory roadmap?

The policy and regulatory roadmap is aimed at pushing China’s installed base of large-scale energy storage – primarily lithium-ion battery energy storage systems (BESS) – to 180GW by the end of 2027.

Where does China's storage capacity come from?

The majority of China's storage capacity comes from large-scale storage projects, such as hydropower with reservoirs on the Yangtze River and gigawatt-level battery energy storage systems in Inner Mongolia.
