Colombia 5G base station electricity introduction bidding

Overview

Will Colombia offer 5G cellular data services?

BOGOTA, Dec 5 (Reuters) - Four operators have been approved to participate in Colombia's auction to offer fifth-generation (5G) cellular data services, the communications ministry said.

How will the 5G spectrum auction impact Colombia?

The 5G spectrum auction is expected to have a profound impact on Colombia's telecommunications landscape and economy. With the availability of 5G spectrum, operators can now invest in deploying next-generation networks that will provide significantly faster data speeds, lower latency, and increased capacity.

Which operators in Colombia have been approved?

Among those approved are the operators of Claro (AMXB.MX) and WOM, as well as Union Temporal Colombia Movil-Telefonica, a partnership between the operators of Movistar (TEF.MC) and Tigo (MICC.F), the ministry said in a statement late on Monday.
