

ContainerPower Energy Solutions

Colombian power generation container

Overview

Electricity supply in Colombia relies on the National Interconnected System (SIN) and several isolated local systems in the Non-Interconnected Zones (ZNI). SIN encompasses one third of the territory, giving coverage to 96 percent of the population. The ZNI, which covers the remaining two thirds of the national territory, only serves 4 percent of the population. Thirty-two large hydroelectric plants and thirty thermal power stations feed electricity into the SI.
