Communication base station EMS link

Overview

In communications, a base station is a communications station installed at a fixed location and used to communicate as part of one of the following:

- a system, or;
- a system such as or .

What is a base station in a two-way radio system?

In professional two-way radio systems, a base station is used to maintain contact with a dispatch fleet of hand-held or mobile radios, and/or to activate one-way paging receivers. The base station is one end of a communications link. The other end is a movable vehicle-mounted radio or walkie-talkie.

What are Maryland's designated EMS base stations?

Maryland's designated EMS Base Stations provide quality on-line medical direction to the State's EMS clinicians. The following information comprises a toolbox for EMS Base Station staff to sustain and improve the quality of their programs.

What is a base station in radio communications?

In radio communications, a base station is a wireless communications station installed at a fixed location and used to communicate as part of one of the following: a wireless telephone system such as cellular CDMA or GSM cell site. Base stations use RF power amplifiers (radio-frequency power amplifiers) to transmit and receive signals.

How does EMS radio communication work?

It may also convert the signal to a telephone signal and send the communications through public or dedicated telephone lines. EMS radio communication takes place in the VHF low band, VHF high band, and UHF band. VHF low band is the radio frequencies from 32-50 megahertz (MHz).

How does EMS rebroadcast a radio signal?

Some rebroadcast by converting signals to radio and others do so by converting to microwaves. It may also convert the signal to a telephone signal

and send the communications through public or dedicated telephone lines. EMS radio communication takes place in the VHF low band, VHF high band, and UHF band.

Why is communication important in EMS?

Communication in EMS is essential. Patients must be able to access the system, the system must be able to dispatch units, EMTs must have a means of communicating with medical direction and receiving facility, and EMTs must be able to communicate vital information to other personnel.
