# Component Solar System

## Overview

---

Astronomers sometimes divide the Solar System structure into separate regions. The inner Solar System includes Mercury, Venus, Earth, Mars, and the bodies in the asteroid belt. The outer Solar System includes Jupiter, Saturn, Uranus, Neptune, and the bodies in the Kuiper belt. Since the discovery of the Kuiper belt, the outermost parts of the Solar System are considered a distinct region.

The Solar System consists of the Sun, planets, moons, asteroids, and comets. Learn about its main components and how they interact in space.

The Solar System consists of the Sun, planets, moons, asteroids, and comets. Learn about its main components and how they interact in space.

The Solar System is our cosmic neighborhood, a vast and dynamic collection of celestial bodies bound together by the immense gravity of the Sun. At its heart, the Sun—a G2-class main sequence star spanning 1.39 million kilometers in diameter—makes up 99.86% of the system's total mass, providing the energy that sustains life on Earth.

The Solar System consists of the Sun and the objects that orbit it. [11] The name comes from Sōl, the Latin name for the Sun. [12] It formed about 4.6 billion years ago when a dense region of a molecular cloud collapsed, creating the Sun and a protoplanetary disc from which the planets and other bodies formed.

The main components that come with every solar power system or solar panel kit are: solar panels, inverters, and mounting hardware. But how do these solar system components convert the sun's energy into usable electricity for your home or business?

On this page, we'll break down all the solar system components and explain how they work.

There are eight planets in the solar system. The four inner terrestrial planets are Mercury, Venus, Earth, and Mars, all of which consist mainly of rock. The four outer planets are Jupiter, Saturn, Neptune, and Uranus, giant planets that consist mainly of either gases or ice. Pluto was considered a planet but is now classified as a dwarf planet.

Get solar offers 100% online leveraging the LG Solar Marketplace. Your dedicated LG Concierge Energy Advisor will guide you step-by-step toward the best solar solution for your home or business.

best LG solar option for you. There are 5 key components in a home's solar system: solar panels, an inverter, an electrical panel, the electric meter.

The eight planets in our solar system, in order from the Sun, are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. Each planet has its own unique characteristics and orbits the Sun at different distances and speeds. For instance, Mercury, the closest planet to the Sun, has a very.
