Construction of inverters for telecommunication base stations in the Netherlands

Overview

What is a typical electrical layout for a telecom base station?

Figure 2 - Typical electrical layout for loads on a telecom base station. As you can see, the load consists mainly of microwave radio equipment and other housekeeping loads such as lighting and air conditioning units. The actual BTS load used on the cell tower.

Why do telcos need a base station?

Most of the energy that telcos consume is derived from fossil fuels, directly or indirectly, and is therefore unsustainable. Base stations are the key energy consumers on any mobile network; their monitoring and upgrade are essential if operators are to compete.

How many telecommunications cell towers will be built in developing countries?

White Paper By Wissam Balshe, Group Leader, Sales Application Engineering Industry predictions estimate that in 2011 and again in 2012, 75,000 new off-grid telecommunications cell towers will be built in developing countries. Over 50 million additional.

Where will off-grid telecommunications cell towers be built?

Off-grid telecommunications cell towers will be built in developing countries. Over 50 million additional wireless subscribers are expected in Africa alone over the next two years. Experts in Asia and South America are estimating the
