# Container Energy Storage System Installation Requirements

- |   |                           |    |                           |
|---|---------------------------|----|---------------------------|
| 1 | PCS Module                | 6  | OPV2 side circuit breaker |
| 2 | Battery room              | 7  | High Volt Box             |
| 3 | Grid side circuit breaker | 8  | BAT side circuit breaker  |
| 4 | Load side circuit breaker | 9  | LCD display screen        |
| 5 | OPV1 side circuit breaker | 10 | MPPT                      |

## Overview

---

How much power does an energy storage container need?

Normal lighting requires a 380/220V power input. Evacuation signs with batteries are provided at exits. 3.8.4.2 Energy storage containers should use rock wool materials for thermal insulation design, featuring insulated wall panels, doors, floor, and roof to prevent the formation of thermal bridges that cause excessive heat loss.

How to choose an energy storage unit?

The choice of the unit should be based on the cooling and heating capacity parameters of the energy storage cabin, alongside considerations like installation, cost, and additional functionalities. 3.12.1.2 The unit must utilize a closed, circulating liquid cooling system.

What are the requirements for enclosure & metal structures?

3.14.3.4 The enclosure frame and metal structures must possess sufficient rigidity and load-bearing capacity. They should meet the installation requirements of electrical components and withstand mechanical, thermal and electromagnetic forces generated during operations and short circuits.

What are the requirements for a power collection unit?

3.14.1.1 It supplies AC and DC power distribution for air conditioning, lighting, firefighting, emergency lights, and both internal and external sockets in the cabinet. 3.14.1.2 The collection unit must be equipped with dual power transfer switches and UPS power supply.

What are the functions of the energy storage system?

The energy storage system supports functions such as grid peak shaving, frequency regulation, backup power, valley filling, demand response, emergency power support, and reactive power compensation. The 2.5MW/5.016MWh battery compartment utilizes a battery cluster with a rated

voltage of 1331.2V DC and a design of 0.5C charge-discharge rate.

What is a 5MWh liquid-cooling energy storage system?

The 5MWh liquid-cooling energy storage system comprises cells, BMS, a 20'GP container, thermal management system, firefighting system, bus unit, power distribution unit, wiring harness, and more. And, the container offers a protective capability and serves as a transportable workspace for equipment operation.
