

## ContainerPower Energy Solutions

# Cote d Ivoire home energy storage system production

## Overview

---

Summary: Cote d'Ivoire is rapidly emerging as a hub for energy storage solutions in West Africa. This article explores the opportunities, challenges, and innovations in battery energy storage system (BESS) manufacturing within the country, with actionable insights for businesses and policymakers. How much energy does Côte d'Ivoire consume per capita?

In the same period, annual consumption per capita went from 174 KWh to 277 KWh (AIE, 2014; A NARE-CI, 2017). However, as of 2014, per capita consumption in Côte d'Ivoire is 43% lower than the average for sub-Saharan Africa and 91% lower than the world average.

Does Côte d'Ivoire export electricity?

Côte d'Ivoire is the third largest electricity market in West Africa and has historically been a net exporter of electricity with 11.8% of its total electricity generation sold to Mali, Burkina Faso, and Ghana in 2019 (ANARE-CI, 2020). 2.1.2. Future cost assumptions Fig. 2 presents the long-term cost assumption for our analysis.

Where does electricity come from in Côte d'Ivoire?

As natural gas is the main source of electricity production in Côte d'Ivoire to date, we pay particular attention to its modeling. Its supply comes either from national gas reserves, via the West Africa Sub-Regional Gas Pipeline (WAGP), or from international gas reserves in the form of liquefied natural gas (LNG).

Will Côte d'Ivoire have a low-cost solar system?

In the case of a low-cost solar scenario, PV capacity is up to 24 GW and storage is nearly 15 GW between 2030 and 2050. In closing its economic gap with emerging markets, Côte d'Ivoire will face a substantial increase in electricity demand over the next three decades.

Does Côte d'Ivoire have a commitment to green energy?

According to its National Determined Contribution (NDC) of 2015, the share of green energy in the electricity mix is expected to reach 42% and greenhouse gas (GHG) emissions from this sector are not expected to exceed 9.2 Gt of CO<sub>2</sub> eq in 2030. To date, Côte d'Ivoire has not made any other quantitative commitment beyond 2030.

Why is natural gas important in Côte d'Ivoire?

Scenarios Today, natural gas is the cornerstone of Côte d'Ivoire's electrical system. As of 2019, it supplied 67% of the electricity produced, and new capacity is planned in the coming years to meet growing demand. Natural gas has the advantage of a well-structured and familiar decision-making process and value chain.
