Croatia new energy solar power generation for home use

Overview

On the sun-drenched plains near Benkovac in Zadar County, a transformative project is taking shape. Croatia's largest solar power plant, SE Korlat, is set to redefine the nation's energy landscape, providing clean electricity to as many as 100,000 households.

On the sun-drenched plains near Benkovac in Zadar County, a transformative project is taking shape. Croatia's largest solar power plant, SE Korlat, is set to redefine the nation's energy landscape, providing clean electricity to as many as 100,000 households.

Croatia is on pace to surpass 1 GW of solar power by 2025, thanks to a surge in installations and supportive government policies. This growth is part of the country's broader commitment to renewable energy and aligns with EU targets to boost the share of renewables in electricity generation.

The first solar power plant in Croatia entirely owned by citizens, located on the roof of the city market in Križevci, has been officially put into operation and will generate enough energy for around 50 households, the City of Križevci announced on Wednesday, reports HINA. This pioneering project.

On the sun-drenched plains near Benkovac in Zadar County, a transformative project is taking shape. Croatia's largest solar power plant, SE Korlat, is set to redefine the nation's energy landscape, providing clean electricity to as many as 100,000 households. With construction imminent and.

As Croatia's largest photovoltaic project to date, the Korlat 75MW PV project is expected to generate 165 million kilowatt-hours of green electricity annually upon completion, meeting the electricity needs of approximately 50,000 Croatian households. Croatia is expected to surpass 1 GW of solar.

Croatia is set to put online a total of 1,200 MW in solar and wind power capacity in 2024, State Secretary in the Ministry of Economy and Sustainable Development Ivo Milatić said on the sidelines of the II Regional Conference RE-Source Croatia Hub 2024, dedicated to the development of power.

Between September 2024 and August 2025, Croatia's electricity consumption reflected a strong reliance on low-carbon sources, with more than two-thirds of its electricity, specifically about 68%, generated from such sources. Hydropower contributed to approximately 38%, and wind made up around 20%.
