## Overview

---

1. Introduction The global energy transition, driven by the urgent need to mitigate greenhouse gas emissions and reduce reliance on fossil fuels, has underpinned the growing integration of renewable energy sources (RES) in electricity systems [1]. The intermittent and non-dispatchable nature of

1. Introduction The global energy transition, driven by the urgent need to mitigate greenhouse gas emissions and reduce reliance on fossil fuels, has underpinned the growing integration of renewable energy sources (RES) in electricity systems [1]. The intermittent and non-dispatchable nature of

Energy storage systems (ESS) have thus emerged as critical enablers for large-scale renewable integration, offering multifaceted functions such as energy arbitrage, frequency regulation, and black-start capabilities [2, 3]. Despite this potential, the economic viability and deployment of ESS face.

Spain's Official State Gazette (BOE) today publishes the Royal Decree amending RD 413/2014, which updates the order of grid-access priority for electricity to boost the penetration of storage and flexible technologies. Spain's Official State Gazette yesterday published Royal Decree (RD) 917/2025.

Spain has launched an ambitious €700 million (around \$796 million) program to increase its energy storage capacity. This plan will add 2.5 to 3.5 gigawatts (GW) of storage. It includes pumped hydro, thermal energy storage, and battery systems. The goal is to improve how Spain uses renewable energy.

The target for energy storage has been increased from 20GW in the previous NECP to 22.5GW by 2030. Image: Iberdrola. Spain has increased its energy storage target by 2030 to 22.5GW in the latest update of its National Energy and Climate Plan (NECP). The Spanish government, through the Ministry of.

With 76 GW of solar capacity targeted by 2030 [3], the country's energy transition hangs on solving one critical puzzle: how to store sunlight efficiently when the grid can't handle the surge. Spain's solar generation peaks at midday, creating the infamous duck curve—a mismatch between supply and.

The Spanish Battery Energy Storage Association (AEPIBAL) stated that the new regulation marks a major breakthrough for energy storage development in Spain. To accelerate energy storage industry growth, the decree stipulates: Energy storage facilities located within the scope of renewable energy.
