Double-layer installation of solar panels

IP65/IP55 OUTDOOR CABINET

OUTDOOR TELECOM CABINET

OUTDOOR ENERGY STORAGE CABINET

19 INCH

Overview

What is a double glass solar panel?

Traditional solar panels typically feature a glass front and a polymer backsheet. In contrast, double glass modules replace the polymer layer with another glass sheet, creating a robust sandwich structure. At IBC SOLAR, we use 2,0 mm x 2,0 mm glass layers, whereas some other market offerings use thinner 1,6 mm x 1,6 mm layers.

Why are double glass solar panels bifacial?

Thermal stability: The identical thermal expansion coefficients of the glass layers minimize stress on solar cells during temperature fluctuations. **Dual-sided energy Capture:** Many double glass modules are bifacial, allowing them to harness sunlight from both sides.

What are the advantages of double glass solar panels?

Environmental shielding: Double glass modules provide excellent defense against moisture, corrosion, and UV radiation, reducing the risk of potential-induced degradation (PID). **Thermal stability:** The identical thermal expansion coefficients of the glass layers minimize stress on solar cells during temperature fluctuations.

What is a double glass module?

In contrast, double glass modules replace the polymer layer with another glass sheet, creating a robust sandwich structure. At IBC SOLAR, we use 2,0 mm x 2,0 mm glass layers, whereas some other market offerings use thinner 1,6 mm x 1,6 mm layers. This ensures greater durability and longevity.

How do I install JA Solar panels?

JA solar recommends installing the modules with a tilt angle of at least 10 degrees, making it easier for dust to be washed off by rain. Ensure the installation method and supporting system of modules is strong enough to

withstand all the load conditions. The Installer must provide this guarantee.

What size glass does IBC Solar use?

At IBC SOLAR, we use 2,0 mm x 2,0 mm glass layers, whereas some other market offerings use thinner 1,6 mm x 1,6 mm layers. This ensures greater durability and longevity. Generally, the front and back glass layers in these modules have the same thickness, contributing to their balanced structural integrity.
