Energy storage battery GW level

Overview

According to the International Energy Agency, global battery energy storage systems stood at about 28 GW in 2022, then shot up with 69 GW added in 2024, showing the fastest growth phase so far. How many GW of battery storage capacity are there in the world?

Strong growth occurred for utility-scale battery projects, behind-the-meter batteries, mini-grids and solar home systems for electricity access, adding a total of 42 GW of battery storage capacity globally.

How big is battery energy storage in 2023?

Global battery energy storage systems, or BESS, rose 40 GW in 2023, nearly doubling the total increase in capacity observed in the previous year, according to a special report published by the International Energy Agency on April 25.

How big will battery storage be by 2030?

Rystad Energy modeling projects that annual battery storage installations will surpass 400 gigawatt-hours (GWh) by 2030, representing a ten-fold increase in current yearly additions.

What is a battery energy storage system?

Battery energy storage systems (BESS) are a configuration of interconnected batteries designed to store a surplus of electrical energy and release it for upcoming demand. Consequently, BESS offers practical solutions for addressing power intermittency challenges.

Why is battery energy storage important in 2022?

As the world transitions to greener sources of power generation such as solar PV and wind, battery energy storage developments will be critical in meeting future energy demand. Global BESS capacity additions expanded 60% in 2022 over the previous year, with total new installations exceeding 43 GWh.

What percentage of lithium-ion batteries are used in the energy sector?

Despite the continuing use of lithium-ion batteries in billions of personal devices in the world, the energy sector now accounts for over 90% of annual lithium-ion battery demand. This is up from 50% for the energy sector in 2016, when the total lithium-ion battery market was 10-times smaller.
