European Enterprise Energy Storage Battery

Overview

How many battery energy storage systems were installed in Europe in 2024?

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking-installations, and bringing Europe's total battery fleet to 61.1 GWh. However, the annual growth rate slowed down to 15% in 2024, after three consecutive years of doubling newly added capacity.

How does European energy use battery storage?

European Energy works actively to implement battery storage in our renewable energy projects. Our battery storage projects are primarily co-located, meaning a regular renewable energy park is combined with batteries on the same plot, sharing the same grid connection.

What is the battery storage Europe platform?

The Battery Storage Europe Platform brings together industry leaders representing the battery storage value chain to advance the business case and regulatory frameworks for battery storage across the EU. Together, we urge a tenfold increase in battery storage by 2030 to ensure Europe's energy transition, security, and competitiveness.

How will Europe's battery storage capacity grow by 2030?

Our Standards: The Thomson Reuters Trust Principles. Europe's battery storage capacity is expected to grow around five-fold by 2030, bringing with it increasing returns for energy majors, project developers and traders, as the cost of new projects falls.

How much does battery storage cost in Europe?

The landscape of utility-scale battery storage costs in Europe continues to evolve rapidly, driven by technological advancements and increasing demand for renewable energy integration. As we've explored, the current costs range

from €250 to €400 per kWh, with a clear downward trajectory expected in the coming years.

Is the battery storage age just beginning in Europe?

Walburga Hemetsberger, CEO of SolarPower Europe (she/her), said: “If Europe has already entered the solar age, the battery storage age is just beginning. With solar energy mainstreaming across the continent, now is the time for European decisionmakers to put batteries at the centre of a flexible, electrified, energy system.
