What is the building a better Grid Initiative?

On January 12, 2022, the Department of Energy (DOE) launched the Building a Better Grid Initiative to catalyze the nationwide development of new and upgraded transmission lines and support investments to expand and modernize the transmission system to create a more resilient and flexible electric grid.

Why do we need a power grid?

This led to the incorporation of renewable energy sources into the U.S. power grid, diversifying our nation's energy portfolio and reducing reliance on traditional fossil fuels. Currently, the U.S. power grid is an engineering marvel, consisting of three main interconnected systems: Eastern, Western, and Texas grids.

How did the power grid start?

The U.S. power grid began with Thomas Edison's Pearl Street Station in 1880 and expanded with contributions from visionaries like Nikola Tesla and George Westinghouse. The grid evolved with innovations such as long-distance transmission lines, hydroelectric dams, and smart grid technologies.

How is the power grid regulated?

The regulation of the power grid in the United States involves a complex framework of federal, state, and local authorities, each with distinct roles and responsibilities. This multilayered regulatory approach ensures the grid's reliability, safety, and accessibility, while also addressing environmental concerns.

What is driving the largest US grid modernization effort in history?

Aging infrastructure, soaring electricity demand, renewable integration, and climate risks are driving the largest US grid modernization effort in history.

How does the power grid work?

The operation of the power grid can be broken down into three primary functions: generation, transmission, and distribution. Generation is the process of producing electrical power.
