Greek solar power home installation

Overview

Broad development of solar power in Greece started in the 2000s, with installations of skyrocketing from 2009 because of the appealing introduced and the corresponding regulations for domestic applications of . However, funding the FITs created an unacceptable deficit of more than €500 million in the Greek "Operator of Electr.

Solar power in Greece has been driven by a combination of government incentives and equipment cost reductions. The installation boom started in the late 2000s with feed-in tariffs has evolved into a market featuring auctions, power purchase agreements, and self-generation. [1]
