## Overview

---

Is NIMH a rechargeable battery?

Nickel-metal hydride battery (NiMH or Ni-MH) is a type of rechargeable battery with good performance. It divides into high voltage and low voltage. NiMH have replaced NiCd for many roles, notably small rechargeable batteries. Lithium-Polymer battery ( LiPo or LIP ) is a rechargeable battery whose electrolyte is solid.

What materials are used to make a lithium hydride battery?

The anode materials include lithium cobalt carbonate, lithium manganese carbonate, lithium iron phosphate, nickel cobalt manganese and nickel cobalt aluminum. Nickel-metal hydride battery (NiMH or Ni-MH) is a type of rechargeable battery with good performance. It divides into high voltage and low voltage.

What materials are used in lithium ion battery?

Lithium-ion battery ( Li-ion or LIB ) includes cylindrical steel shell and square aluminum shell. The anode materials include lithium cobalt carbonate, lithium manganese carbonate, lithium iron phosphate, nickel cobalt manganese and nickel cobalt aluminum.
