Without a battery: They lose \$0.47 every time they export instead of store.
With a 20 kWh battery: They store daytime energy and use it at night—saving \$280/month. Their battery pays for itself in 6 years. This is where most battery savings happen in 2025—not blackouts. Rate arbitrage is real.

Battery energy storage capacity is the total amount of energy the battery can store, measured in kilowatt-hours (kWh) or megawatt-hours (MWh). Think of this as like the size of a water tank where you measure the water capacity in litres. The more energy stored, or more kilowatt-hours (kWh) or.
