# How big an inverter should I use for a 202kw PV panel

**12.8V 100Ah**

## Overview

---

In most cases, the inverter size should be close to the size of your solar panel system, within a 33% ratio. How do I choose a solar inverter size?

To calculate the ideal inverter size for your solar PV system, you should consider the total wattage of your solar panels and the specific conditions of your installation site. The general rule is to ensure the inverter's maximum capacity closely matches or slightly exceeds the solar panel array's peak power output.

Can I use multiple inverters for my solar panel system?

A: Yes, you can use multiple inverters for your solar panel system, commonly known as a micro-inverter system. This setup allows each solar panel to have its own inverter, optimizing performance and allowing for better energy production, especially in situations where panels may be shaded or facing different directions.

Why should you choose a solar inverter size?

Inverters play a vital role in converting the direct current (DC) generated by your solar panels into usable alternating current (AC) for your home. Selecting the proper inverter size ensures that your solar system operates at its full potential, ultimately impacting energy savings and system longevity.

How much wattage does a solar inverter need?

A good rule of thumb is to multiply the total wattage of your solar panels by 1.25 to account for inefficiencies and potential load spikes. For example, if you have a 5 kW solar system, you would need an inverter rated for at least 6.25 kW. Q: What happens if my inverter is too small for my solar panel system?

.

How does a solar inverter affect efficiency?

The efficiency of the inverter drives the efficiency of a solar panel system. Inverters change the Direct Current (DC) from solar panels into Alternating Current (AC), which is what we use in our homes and businesses. This article talks about how to pick the right size solar inverter.

Should a solar inverter be under-sized?

Solar inverter under-sizing (or solar panel array oversizing) has become a common practice in Australia and is generally preferential to inverter oversizing. If an inverter is under-sized, this should happen within certain parameters - which accredited solar installers will be familiar with.
