Choosing the right solar inverter size is critical—and one of the most common questions: what solar inverter size do I need?

Whether you are installing a rooftop system in California, powering a remote cabin in Alberta, or sizing for a community center in Rajasthan, getting it right means.

Your inverter size should match your solar array's capacity, not your electricity bill. This means your inverter doesn't need to power your entire home—it just converts whatever your panels generate. Let's say you have a 6kW solar array (twenty 300-watt panels). Your inverter needs to handle that.

A solar inverter should closely match your solar system's output in kW—typically within 80% to 120% of your total panel capacity. Too big = wasted money. Too small = wasted energy
