How much does a solar water pump inverter system cost

Overview

How much does a solar water pump cost?

A basic, but complete solar water pump kit, will cost around \$2,000. This baseline system will pump water from a few hundred feet deep at a few gallons per minute flow rate. Often solar pumps systems will replace the high costs of electric pumps and generators, high maintenance costs of windmills, and the inconveniences of hauling water.

What is a solar water pump system?

The concept of a solar water pump system is still relatively new. However, like all other water pumping systems, the mechanics are quite similar. It relies on the basic principle of positive displacement and kinetic energy, which is used to move water from one point to another.

How much does a solar well pump cost?

Solar panels come in a range of wattages, but 100-watt is the most common for solar well pumps. These tend to be more affordable than higher-wattage panels, even if you need to buy a greater number of panels. Most solar panels cost between \$1 to \$1.50 per watt, meaning you'll pay between \$100 to \$150 for a standard 100-watt solar panel.

When was solar water pumping invented?

Solar water pumping was invented in the 70s. At the time, the system was quite basic, and it paired solar panels to a DC/AC water pump. Since then, it has gone on to be perfected. Today, the solar water-powered pump can be found in different industries such as the agricultural sector, industrial sector, and domestic settings.

What are the benefits of using a solar pump system?

One of the benefits of using a solar pump system is that it lets you utilize low-yield water sources. With a slow solar pumping system, you can potentially

cut the cost of installing long pipelines. Since the length of the pipes does not affect the energy needed to pump water, the water can be pushed over long distances at a low cost.

How does a solar water pump work?

Solar-powered water pumps are made up of two components: the solar array that harnesses power and the well pump that moves water. You'll need both parts to make a working solar pump setup. Solar panels provide the energy for your pump system to move water up from the well and into your home.
