

## ContainerPower Energy Solutions

# How much electricity can a battery the size of a container store

## Overview

---

How much energy can a storage battery store?

A typical storage battery from The Energy Saving Store can store up to 4kWH of energy; enough to power a kettle 37 times. Up to 16kWH of capacity is available, but speak to The Energy Saving Store about your options. Storage batteries qualify for upfront funding from the Energy Saving Trust as an eco-friendly means to power your home.

How to choose a battery storage container?

To choose the right battery storage container, keep the following points in mind: It should be designed to keep the positive and negative battery contacts from touching each other and be large enough to fit the number of batteries you usually have on hand.

How much energy does a shipping container hold?

Today, a unit the size of a 20-foot shipping container holds enough energy to power more than 3.200 homes for an hour, or 800 homes for 4 hours (approximately 5 MWh of energy/container, 1.5 kW typical residential load). A typical utility scale project could contain up to 100 such units on only 5 to 10 acres of land.

What battery sizes can the container hold?

The container is designed to hold large D batteries all the way down to small AAA batteries. They come in a set of two and they have plastic dividers built right in. The dividers are spaced differently.

How much energy can a Bess store per unit?

The amount of energy a BESS can store per unit volume - known as the energy density - continues to increase. Today, a unit the size of a 20-foot shipping container holds enough energy to power more than 3.200 homes for an hour, or 800 homes for 4 hours (approximately 5 MWh of energy/container,

1.5 kW typical residential load).

What chemistries are used for battery storage?

BESS can be built co-located with an energy generation source (e.g. solar, wind, gas turbine) or as a standalone system. There are many different chemistries on the market for battery storage today, but the most common relies on lithium-ion battery cells. All chemistries are engineered with safety as the number one priority.
