

## ContainerPower Energy Solutions

# Huawei 5G base station electricity costs

Resistant to  $-20^{\circ}\text{C}$ - $55^{\circ}\text{C}$  high and low temperature.

## Overview

---

China Tower and Huawei conducted joint pilot verification in 2018 and found that the 5G Power solution could support effective 5G site deployment without changing the grid, power distribution or cabinets.

How much power does a 5G base station consume?

That's almost a threefold increase compared to 4G (5). One 5G base station is estimated to consume about as much power as 73 households (6), and 3x as much as the previous generation of base stations (5), (7).

Are 5G base stations causing more energy consumption?

However, Li says 5G base stations are carrying five times the traffic as when equipped with only 4G, pushing up power consumption. The carrier is seeking subsidies from the Chinese government to help with the increased energy usage.

Does China Mobile have a 5G base station?

China Mobile has tried using lower cost deployments of MIMO antennas, specifically 32T32R and sometimes 8T8R rather than 64T64R, according to MTN. However, Li says 5G base stations are carrying five times the traffic as when equipped with only 4G, pushing up power consumption.

How much power does 5G power use?

The site's average load is 1.4 kW, with peak loads of 2.7 kW. However, the AC power limit is 1.6 kW. When 5G services were added in tests, peak loads exceeded the power limit. 5G Power's intelligent peak shaving technology leverages smart energy scheduling algorithms of software-defined power supply and intelligent energy storage.

What is 5G power boost Li lithium battery?

Moreover, the increased power consumption of the hardware increased line loss and energy wastage. With intelligent voltage boosting, the 5G power module and 5G Power BoostLi lithium battery work in tandem to support

power supply to the system at a constant voltage.

What is green 5G power?

3. Green 5G Power focuses on improving energy and E2E efficiency at the component, site, network, and service level, consuming zero watt when there are zero bits. Traditional power systems only enable site-level efficiency and cannot coordinate with changes in service power consumption.
