

## ContainerPower Energy Solutions

# India s energy storage solar

## Overview

---

The Central Electricity Authority, through its National Electricity Plan document, estimates that if India is to achieve its COP 26 goals, it will need 292GW of solar, 100GW of wind, accompanied by 41.7GW/228.5GWh of battery storage capacity along with 18GW of pumped hydro, ranging between 6-8 hours of storage. Does India need a solar energy storage system?

India's Ministry of Power has mandated all renewable energy implementing agencies and state utilities must incorporate a minimum of two-hour co-located energy storage systems (ESS), equivalent to 10% of the installed solar project capacity, in future solar tenders. From pv magazine India.

Is India a leader in energy storage innovation?

The Stationary Energy Storage India (SESI) 2025 conference brought together 200+ global leaders, signaling robust policy, investment, and innovation momentum. With national and international collaboration, India is positioning itself not only as a leader in renewable energy deployment but also as a major force in energy storage innovation.

How much does energy storage cost in India?

Overall, the levelised cost of energy storage is now INR 6-7 per kWh – a sharp decline from INR 8-9 per kWh in 2022. A report by the International Energy Agency (IEA) underscores a strong growth in the utility-scale battery storage market, with solar PV modules and battery storage becoming the backbone of the country's power grid by 2050.

Does India need a battery storage system?

At present, to support the country's energy target by 2030 and simultaneously, balance the grid with the rising penetration of renewables in the energy mix, India requires an advanced battery storage ecosystem with over 238 GWh of capacity. However, the viability of the energy storage system ecosystem remains pegged to the capital cost of the BESS.

Is energy storage a viable option in India?

However, the viability of the energy storage system ecosystem remains pegged to the capital cost of the BESS. As compared to the conventional sources of energy, solar PV when integrated with battery storage is a cost-competitive option. This trend is expected to continue in India.

Is solar PV a cost-competitive option in India?

As compared to the conventional sources of energy, solar PV when integrated with battery storage is a cost-competitive option. This trend is expected to continue in India. India's commitment to a sustainable energy future is evident through its multifaceted approach to battery energy storage.
