Iran 5G communication base station distance

Overview

Does Iran have a 5G network?

Iran's Communications Regulatory Authority (CRA) recently announced plans to award 5G licences in the 3.5GHz band, while rival MNO Mobile Communication Company of Iran (MCI) is expected to announce its own commercial 5G launch in the near future.

Why is Iran looking for 5G & LTE in 2021?

Operators have invested in broadening the reach of their LTE networks, which has increased network capacity and improved the quality of mobile broadband services. The country is also looking to 5G, with services having been launched by MCI and MTN Irancell in early 2021.

Is MCI launching 5G in Iran?

State-owned MCI has expanded its 5G coverage with a launch on the island of Kish, off the coast of southern Iran. The launch coincided with the KITEEX 2022 International Exhibition which has been taking place this week on the island. MCI first introduced 5G services in Tehran in March 2021.

Does Irancell have a 4G network?

On 3 December 2014, Irancell officially launched Iran's first 4G LTE network in nine cities. The License was granted as on a national basis and includes the overall geographical coverage of Iran. Irancell made countrywide coverage with FD-LTE and TD-LTE. As of December 2021, Irancell has 50.4 million active subscribers.

Does MTN Irancell have 5G?

MTN Irancell has launched the country's first commercial 5G service, though it is currently only available in one area of Tehran. The firm had previously been testing 5G services at three locations in the capital.

How does distance affect a 5G network?

As the distance increases, the signal weakens, resulting in reduced coverage and slower speeds. However, with advancements such as beamforming and MIMO technology, 5G networks can optimize the signal direction and coverage, mitigating the impact of distance to some extent.
