Iran lithium battery site

Overview

Iran says it's discovered a massive deposit of lithium — a key element in batteries for devices and electric vehicles — in one of its western provinces. Why is Iran expanding its capacity for lithium batteries?

Iran's capacity for production of lithium batteries is expanding to help its electrification drive. Iran is planning to expand its home-grown infrastructure for production of lithium batteries to respond to the electrification needs in its automotive sector, according to a senior official in the country's defense ministry.

Can Iran make lithium batteries for electric vehicles?

Reza Shojaei, who serves as a deputy head at the Iranian defense ministry's department for energy resources, said on Tuesday that Iran has the technology needed to design and manufacture lithium batteries that are used in electric vehicles.

Is Iran's lithium deposit the world's second largest?

Iran's recent unearthing of a vast lithium deposit – potentially the world's second largest – has sent shockwaves through the global lithium competition landscape. Amid the shifting currents of these developments, two key players stand out: China and Australia.

Does Iran have a lithium reserve?

"For the first time in Iran, a lithium reserve has been discovered in Hamedan" in the country's west, an official at Iran's Ministry of Industry, Mines and Trade said. The ministry believes the deposit holds 8.5 million tons of lithium, which is often called "white gold" for the rapidly growing electric vehicle industry.

Will Iran be the first entrant to lithium?

As the Middle East's first entrant into lithium, all eyes will be on Iran. Finding lithium in the region indicates that the middle east mining sector may become

a new and key player supplying battery metals and critical minerals contributing to the global battery and electric mobility ecosystem.

Did Iran find lithium in the Atacama Desert?

A lithium mining machine moves a salt by-product at the mine in the Atacama Desert in Salar de Atacama, Chile on October 25, 2022. Iran says it's discovered a massive deposit of lithium — a key element in batteries for devices and electric vehicles — in one of its western provinces.
