Irish Energy Storage Products

Overview

What is energy storage Ireland?

Energy Storage Ireland is a representative association of public and private sector organisations who are interested and active in the development of energy storage in Ireland and Northern Ireland. Delivering the energy storage technologies to enable a secure, carbon free electricity system on the island of Ireland by 2035.

When will long duration energy storage be available in Ireland?

The Irish Electricity Storage Policy Framework, published after this data was collected, indicates that an immediate route to market for 500 MW of long duration energy storage is currently being developed, with further studies planned to support long duration storage from 2030 to 2040 (Government Of Ireland 2024a).

Does Ireland need more energy storage?

This study documents industry perspectives from Ireland, a country which requires a significant increase in the development of energy storage due to security of supply concerns, its isolation from Europe's central transmission network and its reliance on wind energy as a primary intermittent renewable energy resource.

Are there policy barriers to energy storage in Ireland?

This reflects the findings of (Haji Bashi et al., 2022) which indicate the existence of significant policy barriers in the development of energy storage in Ireland and research which highlights gaps in public knowledge on the topic of energy storage (Zaunbrecher et al., 2016).

What changes are needed to increase energy storage development in Ireland?

The focus group participants noted several key second stage policy areas that required changes in order to increase the amount of energy storage

development in Ireland. These included legislative changes, adjustments to the planning approval process, the development of forecasting models, grid improvements and the introduction of targets.

What is the Irish electricity storage policy framework?

The Irish Electricity Storage Policy Framework indicates the potential for an as yet undefined route to market mechanism to enable electricity storage systems to bulk time shift taking into account societal, locational signals, carbon reductions, marginal cost abatement and technological comparisons.
