# Is it safe to store lead-acid batteries in containers

## Overview

---

Is it safe to store lead-acid batteries in containers Lead acid batteries (SLA) should be recharged every two months during storage. Do not store them longer than six months without recharging. How do you store a lead acid battery?

Store lead acid batteries in a ventilated area at 50°F–80°F (10°C–27°C). Ensure they're charged to 50–70% capacity before storage. Check voltage monthly and recharge if below 12.4V. Keep terminals clean and coated with anti-corrosion gel. Use non-conductive racks to prevent short-circuiting and avoid stacking batteries unless designed for it.

What temperature should lead acid batteries be stored?

All lead acid batteries discharge when in storage – a process known as 'calendar fade' – so the right environment and active maintenance are essential to ensure the batteries maintain their ability to achieve full capacity. This is true of both flooded lead acid and sealed lead acid batteries. The ideal storage temperature is 50°F (10°C).

What materials can be used to store lead acid batteries?

When choosing a material for acid storage, it is essential to select acid-resistant materials such as high-density polyethylene (HDPE) or polypropylene. These materials are compatible with battery acid and provide excellent resistance to corrosion and leakage. How Long Can You Store Lead Acid Batteries?

Are lead acid batteries dangerous?

Lead acid batteries are classified as a dangerous good and used or waste lead acid batteries are also classified as a hazardous waste. As a result their storage and transportation is controlled by several different regulations. You can find here, a summary of the Australian storage and transport regulations

for lead acid batteries.

How often should a lead acid battery be recharged?

Sealed lead acid batteries need to be kept above 70% State of Charge (SoC). If you are storing your batteries at the ideal temperature and humidity levels then a general rule of thumb would be to recharge the batteries every six months. However if you are not sure then you can check the voltage as follows:.

How long do lead acid batteries last?

However, to prevent degradation, it is essential to regularly check the battery's charge level and ensure it is stored in a cool, dry place. Generally, lead-acid batteries can be stored for up to six months to a year without significant performance loss. Is It Safe to Store Lead Acid Batteries Indoors?
