Italy installs solar power generation system

Overview

Solar power is an important contributor to electricity generation in Italy, accounting for 12.3% of total generation in 2023, and with a total installed capacity of 36.01 GW. [1][2] As of 2023, government plans are targeting solar PV capacity to rise to 79 GW by 2030. [3].

[1][2] As of 2023, government plans are targeting solar PV capacity to rise to 79 GW by 2030. [3] Like most countries, solar.

The growth of solar photovoltaic (PV) installations in Italy has surged significantly, with cumulative installed capacity surpassing the 40 gigawatts (GW) mark as reported in early 2024. In the first half of 2024 alone, Italy added 3.4 GW of new capacity, with 1.6 GW installed in the second.

Italy Surpasses 2 Million Photovoltaic Systems and 40 GW of Installed Capacity According to data processed by Italia Solare based on Terna's Gaudi database, Italy has achieved a significant milestone by exceeding 2 million photovoltaic (PV) systems connected to the national grid, reaching a total.

Italy's cumulative installed photovoltaic (PV) capacity reached 38.5 GW by the end of March 2025, according to data released by Anie Rinnovabili, the Italian renewables association, based on figures from national grid operator Terna. In the first quarter of the year, Italy added 1,244 MW of new.

Rome, April 2025 - In a bold move to meet its EU-mandated greenhouse gas emissions targets, Italy is accelerating its renewable energy strategy under the Integrated National Energy and Climate Plan (PNIEC Italy). The government has set ambitious goals for increasing renewable energy on the national.

Italy currently has 140GW of solar PV projects in its grid connection queue. Image: Juwi In 2023, Italy installed over 5GW of new solar PV generation capacity, by some distance the most since 2011. Of last year's new capacity, a far larger share was taken up by large-scale projects; the national.
