Laying solar panels

Overview

In this guide, we'll explain a typical solar panel installation from start to finish, as well as what all the hardware does, and where on your property you can install the panels. Can solar panels be installed flat?

Yes, you can install solar panels flat, but they will experience a degree of energy loss without the slightest inclination towards the sunlight. Although it certainly is advantageous to have a roof that is inclined in the sun's direction, a flat surface will also do.

How do I prepare a flat roof for solar panel installation?

Preparing a flat roof for solar panel installation involves several crucial steps. Proper planning ensures a safe, efficient, and compliant process. I always start by examining the roof's structural integrity. Flat roofs must handle the weight of panels and mounting systems. I check for leaks, cracks, or areas needing reinforcement.

Should you put solar panels on a flat roof?

Although it certainly is advantageous to have a roof that is inclined in the sun's direction, a flat surface will also do. With a flat roof, your solar panels will still get direct sunlight, which is the whole point of putting them on the roof.

How do you install solar panels?

The installation process involves securing the panels to the mounting structure using clamps or brackets, followed by precise alignment to ensure efficiency. Proper grounding and weatherproofing are also essential steps to protect the system from environmental factors and ensure long-term durability.

Can you install solar panels on the ground?

You can install ground-mounted solar panels, though you'll again need more

space than you would if you installed panels on a pitched roof. This is because you'll need to space out your panels so they don't cast shade on each other, just like on a flat roof.

Can you install solar panels above a roof?

If you move ahead, make sure you stay within planning permission guidelines. Your panels must not stick out more than 60cm from the roof's surface, and no part of the installation can be more than four metres above the roof. Can you install solar panels on the ground?
