

## ContainerPower Energy Solutions

# Mexican Flywheel Energy Storage Company

## Overview

---

What is a flywheel energy storage system (fess)?

To solve this problem, London-based startup Levistor has developed an innovative Flywheel Energy Storage System (FESS), which acts as a kinetic battery. This technology stores energy from the grid during periods of low demand and releases it rapidly when an EV needs a quick charge. It can deliver 100 miles of range in just five minutes.

What is a flywheel storage system?

The flywheel system offers an alternative. Beacon Power reports that 18-megawatts from the new flywheel storage system are already online, and the system will be operating at full capacity by the end of June. Flywheels are an ingenious way to store energy. Essentially, a giant rotor is levitated and spun in a chamber by way of magnets.

What are the benefits of a flywheel system?

2. Renewable Energy Integration These systems are particularly effective for integrating renewable energy sources, such as wind and solar. Flywheels can store excess energy generated during peak production times and release it when generation is low, ensuring a consistent energy supply.

What is a high efficiency flywheel energy storage system?

High Efficiency Flywheel energy storage systems offer high round-trip efficiency, typically around 85-95%. This means that a significant portion of the energy used to charge the flywheel can be recovered during discharge. 2. Rapid Response Time These systems provide a quick response to changes in energy demand.

What is a 20 megawatt flywheel energy storage system?

The 20-megawatt system marks a milestone in flywheel energy storage technology, as similar systems have only been applied in testing and small-

scale applications. The system utilizes 200 carbon fiber flywheels levitated in a vacuum chamber. The flywheels absorb grid energy and can steadily discharge 1-megawatt of electricity for 15 minutes.

Why do we need advanced flywheel energy storage systems?

This brings us to the pressing need for innovative solutions such as Advanced Flywheel Energy Storage Systems (FESS), which offers a sustainable and efficient alternative. FESS offers unparalleled longevity and reliability, with lifespans exceeding 50,000 cycles and design lives of over 25 years.
