N-type solar panel price

Overview

According to RegenPower, current pricing for N-type panels ranges from \$0.40 to \$0.60 per watt, compared to \$0.30 to \$0.50 per watt for conventional panels. How much does a resale solar module cost?

For example, N-Type modules by REC listed for resale in May and July pushed up weighted average prices to \$0.411 and \$0.460 respectively. P-Type modules in September increased to \$0.311 as modules by Sirius PV, Solar4America, and Panasonic were remarketed. The same price increase was present in P-Type Bifacials for the month of December.

What are the advantages of n-type solar cells?

In comparison to traditional P-type solar cells, N-type solar cells have advantages such as high conversion efficiency, high bifaciality, low temperature coefficient, almost no light-induced degradation, and good performance in low-light conditions. It is widely regarded in the industry as the next generation solar module technology. 1.

What is the PV module price index?

The PV Module Price Index tracks wholesale pricing and supply of crystalline-silicon modules that have fallen out of traditional distribution channels, and as a result are listed for resale on the EnergyBin exchange.
