Nanya solar Panel Equipment

Overview

Does Nanya have a DRAM product portfolio?

Nanya has a complete DRAM product portfolio and continues to make inroads in advanced products and services. Our focus on innovation has resulted in the successful development of 10nm-class process technology, which will enable the next three generations of DRAM, including the DDR5 and LPDDR5 products.

How much will Nanya invest in a new Fab?

In addition to current facilities upgrades, Nanya plans to invest approximately NT\$ 300 billion for a new fab with a two-story clean room. The construction has started in 2022, and once completed, future generations of our 10nm-class technologies and products will be implemented and produced.

Are solar panels monocrystalline or polycrystalline?

Solar panels will generally be categorized as one of two technologies: monocrystalline and polycrystalline. Both types have the same function and are made from silicon cells, but the outward appearance and price differ significantly. Monocrystalline panels are more efficient and expensive and come with a dark blue or black tint.
