New energy storage power supply capacity

Overview

In 2025, capacity growth from battery storage could set a record as EIA expects 18.2 GW of utility-scale battery storage to be added to the grid. US battery storage already achieved record growth in 2024 when power providers added 10.3 GW of new battery storage capacity.

In 2025, capacity growth from battery storage could set a record as EIA expects 18.2 GW of utility-scale battery storage to be added to the grid. US battery storage already achieved record growth in 2024 when power providers added 10.3 GW of new battery storage capacity.

We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U.S. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory report. This amount represents an almost 30% increase from 2024 when 48.6 GW of capacity was installed, the largest.

EIA expects 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the US power grid in 2025 in its latest Preliminary Monthly Electric Generator Inventory report. This amount represents an almost 30% increase from 2024 when 48.6 GW of capacity was installed, the largest.

Solar has seen massive growth since 2010. There are now 255 gigawatts direct-current of solar capacity installed nationwide, enough to power over 43 million homes. In the last decade, solar deployments have experienced an average annual growth rate of 28%. Strong federal policies like the solar.
