

## ContainerPower Energy Solutions

# New hybrid energy storage in West Asia

## Overview

---

This project is the largest hybrid energy storage installation in China and hosts the world's largest grid-forming vanadium redox flow battery, set to reach a 250 MWh/1 GWh capacity in the project's second phase. What is the largest hybrid energy battery storage system in the world?

For example, the Energy Superhub Oxford project, which was operational in 2021, is the largest hybrid energy battery storage system in the world, with a capacity of 55 MWh (50 MW/50 MWh LIBs, 2 MW/5 MWh VRFBs).

What is a hybrid energy storage system?

As an effective solution to address this issue, HESSs have proven to be the most viable choice. Hybrid solutions, in which two or more energy storage methods cooperate with one another, aim to leverage the most interesting characteristics of different technologies while enhancing the overall energy storage lifespan [72, 113 – 116].

What is the largest battery storage facility in the world?

In 2023, the Moss Landing energy storage facility in California came on line with a capacity of 750 MW/3000 MWh, making it the largest battery storage project in the world.

Is hydrogen energy storage a viable option in China?

Multiple pilot projects in China have shown the feasibility and benefits of hydrogen energy storage. An example is the Qinghai Hydrogen Valley program, which integrates solar energy production with hydrogen generation and storage.

Is hydrogen storage a long-term strategy for grid stability?

Hydrogen storage is a potential long-term strategy for grid stability because, despite its lower efficiency (50 %), it offers a greater energy density (120 MJ/kg) and can store energy for months. Table 3.

Will Green Hydrogen meet China's long-term energy storage requirements?

Significant energy storage is required to augment the current capacity of solar and wind generation, leading to elevated prices. According to Refs. , green hydrogen, when generated and used in fuel cells or combustion systems, has the potential to satisfy all of China's long-term energy storage requirements.
