ContainerPower Energy Solutions

North Africa Electric Charging Station Energy Storage Station

Overview

Why is SCU building an integrated light-storage-charging charging station in Africa?

The construction of the integrated light-storage-charging charging station in Africa clarifies that SCU fully considers energy demand and natural resources in the deployment of clean energy, while saving the operating cost of ev charger post, which will provide an important demonstration for the sustainable development of energy.

What are new EV charging stations?

The “ new EV charging stations ” use solar energy to generate electricity, and with the help of the energy storage system, it provides convenient charging services for new energy vehicles and increases multiple benefits, widely favored by the market.

What are the bottlenecks in the development of integrated charging stations?

The high cost of energy storage is the bottleneck for the development of the integrated charging station with optical storage and charging. On the basis of ensuring safety and reliability, SCU continues to explore technological breakthroughs to reduce investment costs and increase long-term benefits.

How safe is the EV charging station?

In terms of safety, the overall protection level of the EV charging station is IP55, the metal closed shell, flame retardant and fireproof; it adopts air cooling mode, independent cooling air duct, and has overvoltage, undervoltage, overcurrent, overtemperature, output short circuit, leakage protection, etc.

What are the problems with local power plants in Africa?

Local power plants in Africa are mainly based on hydropower and diesel, with high costs, unstable grids, and imperfect charging facilities, which seriously

restrict the development of new energy vehicles.
