North American Battery Energy Storage Solution Design

Overview

Which segment dominates the North American battery storage system market?

The utility segment dominates the North American battery storage system market, commanding approximately 82% of the total market share in 2024, while also exhibiting the strongest growth trajectory with a projected growth rate of around 9% from 2024 to 2029.

How many battery energy storage systems are being built in Texas?

October 2024: RWE began constructing three battery energy storage systems (BESS) in Texas, increasing their total projects under construction to 931 MW across California, Texas, and Arizona. The Crowned Heron 1, Crowned Heron 2, and Cartwheel 1 projects in Texas will collectively provide 450 MW of power capacity and 900 MWh of storage capacity.

What is the competitive landscape for battery storage?

The competitive landscape is characterized by a mix of established electrical equipment manufacturers, automotive companies expanding into energy storage, and pure-play battery storage specialists.

Why are companies investing in battery energy storage technology?

Companies are heavily investing in research and development to enhance battery energy storage system technology capabilities, focusing on improved energy density, longer lifecycles, and enhanced safety features.

How many energy storage projects does Engie have in North America?

Today, ENGIE has 3 grid-scale energy storage projects in North America with the capacity to deliver 520 MW of power to the grid and another 2 GW under construction. These projects support the growing demand for renewable energy and enable greater reliability and resilience on power grids, while enabling the net zero energy transition.

When will Alliant Energy Supply a compressed carbon dioxide battery system?

October 2024: Energy Dome secured a supply agreement with Alliant Energy to provide a 20-MW/200-MWh compressed carbon dioxide battery system for the Columbia Energy Storage Project in Wisconsin. Located near the 1,023-MW coal-fired Columbia Energy Center, this project will replace the retiring coal units by mid-2026.
