

## ContainerPower Energy Solutions

# Norway solar hybrid power station

## Overview

---

Search all the latest and upcoming hybrid power generation plant projects, bids, RFPs, ICBs, tenders, government contracts, and awards in Norway with our comprehensive online database. How do power plants in Norway work?

Many power plants in Norway have storage reservoirs and production can therefore be adjusted within the constraints set by the licence and the watercourse itself. Wind and solar power are intermittent; electricity can only be generated when the energy is available. The same applies to run-of-river power plants and small-scale hydropower plants.

Are solar power plants a good investment in Norway?

Most solar installations are rooftop systems installed on private homes and industrial buildings, primarily covering the owners' own electricity consumption. In recent years, there has been growing interest in ground-mounted solar power plants. Norway's thermal power plants accounted for about 1.5% of the total production capacity in 2025.

Does Norway have hydropower?

Hydropower accounts for most of the Norwegian power supply, and the resource base for production depends on the precipitation in a given year. This is a significant difference compared to the rest of Europe where security of supply is mainly secured through thermal power plants, with fuels available in the energy markets.

How many thermal power plants are there in Norway?

Hence, production often depends on the electricity needs of the industry. These power plants use a variety of energy sources, including municipal waste, industrial waste, surplus heat, oil, natural gas and coal. There are 30 thermal power plants in Norway, with a total installed capacity of about 538 MW.

How do hydropower plants work in Norway?

Some small hydropower plants make use of the head of water between reservoirs. More than 75 % of Norway's production capacity is flexible. By using storage reservoirs, flexible hydropower plants can produce electricity even in periods when there is little precipitation and inflow is low.

Where is the world's northernmost floating solar power plant located?

With the site located in the Nærøysund municipality of Trøndelag, the solar array will become the world's northernmost floating solar power plant once delivered. Roy Emilsen, Emilsen Fisk CEO, says the system is scheduled to be in place next month.
