

ContainerPower Energy Solutions

On-site energy like solar energy

Overview

They are energy efficiency, generation and storage technologies deployed at or near the point of use. Think of solar panels on our rooftops or in our car parks, generators behind our buildings, or battery storage units humming away in our warehouses.

They are energy efficiency, generation and storage technologies deployed at or near the point of use. Think of solar panels on our rooftops or in our car parks, generators behind our buildings, or battery storage units humming away in our warehouses.

On-site renewable generation refers to the production of clean and sustainable energy from renewable sources at or near the location where it is consumed. It involves setting up renewable energy systems like solar panels, wind turbines, or small-scale hydroelectric generators to generate electricity on-site.

Onsite energy refers to electric and thermal energy generation and storage technologies that are physically located at an industrial facility or other large energy users, and provide onsite energy services directly to their site.

Facility owners seeking to reduce their operating costs, lower greenhouse gas emissions, and build resiliency at their facilities can benefit from installing on-site renewable energy generation and on-site energy storage systems.

Discover how large energy users are turning to on-site power generation to offset rising capacity costs, improve reliability, and meet green goals.
