# Outdoor power inverter regulation

## Overview

---

In the 2020 NEC ®, Section 690.4 (F) stated that electronic power converters (inverters, dc-to-dc converters, and electronic charge controllers) and their associated devices shall be permitted to be mounted on roofs or other exterior areas that are not readily accessible.

In the 2020 NEC ®, Section 690.4 (F) stated that electronic power converters (inverters, dc-to-dc converters, and electronic charge controllers) and their associated devices shall be permitted to be mounted on roofs or other exterior areas that are not readily accessible.

New US regulations for grid-tied inverters are set to take effect in January 2026, impacting manufacturers, installers, and consumers by introducing enhanced safety, cybersecurity, and grid support functionalities for a more resilient and modern power system. The landscape of solar energy is.

As a rule, inverters designed for outdoor use may be installed either outdoors or indoors, however indoor inverters can only be installed indoors. The great majority of grid-tied or string inverters available today are designed for outdoor installation. A survey of all the major manufacturers shows.

This inverter was mounted on the roof in compliance with a previous code cycle since language did not yet exist permitting it to be on a mezzanine inside the building that required a portable ladder to access it. Code Change Summary: Revised language to clarify equipment accessibility. In the 2020.

On November 17, 2022, the Federal Energy Regulatory Commission (FERC or Commission) issued a Notice of Proposed Rulemaking (NOPR) that focuses on reliability issues related to the growth of inverter-based resources (IBRs). IBRs refer primarily to renewable sources of generation such as solar.

There is a patchwork of federal, state, and local policies and regulations pertaining to renewable energy systems that impact your project development. It is important to understand the policy landscape early in your development process. State Solar Carve-Out Programs - Learn about which states.

The Essential Grid Operations from Solar (EOS) project is a national laboratory-led research and industry engagement effort that aims to expedite the development and adoption of reliability standards for inverter-based resources (IBR) integrating into electric power systems. The EOS project is.
