Pakistan buys solar power for home use

Overview

But the millions of new solar users — like Zia and his neighbors — are having an impact on the financing of Pakistan’s power sector. That’s because of reforms that date back to the 1990s.

But the millions of new solar users — like Zia and his neighbors — are having an impact on the financing of Pakistan’s power sector. That’s because of reforms that date back to the 1990s.

Pakistan's solar boom grows out of a decades-long power sector crisis, which has caused many Pakistanis to lose faith in the state's ability to consistently provide reliable electricity.

Conventionally generated electricity in Pakistan has become very expensive, but consumers don’t have to buy it. They are adopting solar panels.

Pakistan, home to more than 240 million people, is experiencing one of the most rapid solar revolutions on the planet, even as it grapples with poverty and economic instability. The country has.

Declining solar panel prices, coupled with skyrocketing grid electricity tariffs that have increased by 155% over three years, are fuelling a rush in renewable energy adoption in Pakistan, with solar power leading the way. The country is now the world’s sixth-largest solar market.
