Power generation of solar power plants in Vietnam

Overview

In July 2024, Vietnam's renewable energy sector generated a total of 24.02 billion kWh, representing 13.4 percent of the country's total electricity production. This included 16 billion kWh from solar power and 7.3 billion kWh from wind energy, according to data from Vietnam.

In July 2024, Vietnam's renewable energy sector generated a total of 24.02 billion kWh, representing 13.4 percent of the country's total electricity production. This included 16 billion kWh from solar power and 7.3 billion kWh from wind energy, according to data from Vietnam.

Vietnam, which aims to achieve carbon neutrality by 2050, is promoting the spread of renewable energy. In particular, new installations of photovoltaic power generation have expanded rapidly since 2019, driven by investment incentives and other factors. Although there are signs of a lull in the.

Vietnam's solar power industry has experienced rapid growth in recent years, driven by favourable government policies and increasing demand for renewable energy. With abundant solar potential due to its geographical location, the country has become a significant player in the Southeast Asian.

Solar power has emerged as a key component of Vietnam's strategy to diversify its energy portfolio and reduce its carbon footprint. Recent developments of the regulatory framework governing solar power projects in Vietnam, as discussed below, highlight the country's commitment to renewable energy.

According to GlobalData, solar PV accounted for 23% of Vietnam's total installed power generation capacity and 11% of total power generation in 2023. GlobalData uses proprietary data and analytics to provide a complete picture of this market in its Vietnam Solar PV Analysis: Market Outlook to 2035.

Vietnam's PDP8 reaffirms a strong renewable push, targeting up to 73 GW of solar and 50 GW of wind by 2030—over three times today's capacity. (Image: iStock) Vietnam's revised Power Development Plan VIII (PDP8) marks a

decisive step toward transforming the country's power sector into a more.

Vietnam aims to raise its total installed power generation capacity to a range of 183 to 236 gigawatts by 2030, up from more than 80 GW at the end of 2023, the government said late on Wednesday, citing details of an amended national power development plan. Power-generating windmill turbines are.
