

## ContainerPower Energy Solutions

# Slovenia Gravity Energy Storage Project

## Overview

---

Gravitricity has developed a unique energy storage system, known as GraviStore, which uses heavy weights – totalling up to 12,000 t – suspended in a deep shaft by cables attached to winches.

Gravitricity has developed a unique energy storage system, known as GraviStore, which uses heavy weights – totalling up to 12,000 t – suspended in a deep shaft by cables attached to winches.

Mine owners across Europe are looking at a new form of underground energy storage to offer a low carbon future as operations wind down. Active deep mine operators in Slovenia, Germany, The Czech Republic and Finland are all examining how underground gravity energy storage – provided by Edinburgh.

Gravitricity is assessing the potential to install a GraviStore gravity energy storage pilot system in a ventilation shaft at the Velenje coal mine in northeastern Slovenia. Gravitricity is assessing the potential to install a GraviStore gravity energy storage pilot system in a ventilation shaft at.

An operational coal mine in Slovenia has become the latest site in mainland Europe to explore underground energy storage. The Velenje mine in the northeastern part of Slovenia is currently a fully operational lignite mine, with six working shafts and more than 1,600 employees. The operators have.

Based in Edinburgh, Gravitricity has developed a new, innovative gravity energy storage system known as GraviStore. Using the force of gravity, this unique technology raises and lowers heavy weights suspended by cables attached to winches in underground mine shafts, offering a sustainable.

Edinburgh-based company Gravitricity has announced its plans to develop underground gravity energy storage projects for deep mine operators in Slovenia, Germany, the Czech Republic, and Finland. This innovative approach repurposes end-of-life mine shafts, which would otherwise face expensive.

As mining operations wind down across Europe, mine owners are turning to innovative solutions for a sustainable future, eyeing underground energy

storage as a pathway to a low-carbon economy. Active deep mine operators in Slovenia, Germany, The Czech Republic, and Finland are investigating the.
