Solar panel power station in Kenya

Overview

The solar farm sits on 85 hectares (210 acres) and consists of 200,200 solar panels and is expected to be the largest in East and Central Africa. It is expected to create about 1,000 jobs during the construction period. The power from this power station is enough to power about 625,000 homes. The power station is owned and operated by , a agency.

The Garissa Solar Plant is the largest grid connected solar power plant in East & Central Africa. This is the first time that Kenya has developed a major solar power plant to harness its abundant solar energy resource to diversify the power generation mix and reduce energy costs.

Solar PV capacity accounted for 16.4% of total power plant installations globally in 2023, according to GlobalData, with total recorded solar PV capacity of 1,496GW. This is expected to contribute 33.7% by the end of 2030 with capacity of installations aggregating up to 4,822GW. Of the total global.
